

**GENERAL**

- Project: Pavement renovation
- Location: Amberg
- Year of construction: 2019
- Product: Rapid Set MORTAR MIX

**PROJECT DESCRIPTION**

The city of Amberg wanted to make its center more attractive for cyclists and seized the opportunity to profit from public funds, which were laid out for the improvement of cycling in Germany.

In Franziskanergasse, cycling is now comfortably bump-free, and as a beneficial side effect not be underestimated, a considerable noise reduction. Before, residents suffered from loud driving noise by cars and supplier traffic. Also a pedestrian cross way was created allowing the barrier-free crossing of the road.

These measures are important in view of a future-oriented design of the inner city that preserves on the one hand the charming flair of the old pavings and on the other features barrier-free accessibility, noise reduction and higher safety for cyclists and pedestrians. And finally entails an improvement of the quality of life and attractiveness of the city.

The renovation works were carried out during flowing traffic. The fast-setting, multipurpose mortar, Rapid Set MORTAR MIX of the KORODUR line made this possible. A truly satisfactory renovation measure.
